

SysML

The language of systems engineering

Laurent Gasser, Consultant in Systems Engineering, ELRIS Conseil in Paris

The event starts with an introduction to the Swiss Society of Systems Engineering presented by Stefan Aeschbacher, the SSSE vice-president.

The evening continues with a talk by Laurent Gasser. Initially the method used by the systems engineer to cope with complex systems is sketched together with some of the tools commonly used. Then comes a description of SysML, internationally praised as the language of systems engineering. In conclusion the speaker suggests paths to overcome the limitations of SysML.
