

# Implementing Continuous Improvement in Product Development

Blaise Rey-Mermet, EVOCEAN GmbH

To achieve sustainable shortest lead time and best product quality, it is not sufficient to define new engineering practices. We need to experiment, adapt and continuously improve them. In this lecture, we discuss various practices and show examples from projects on:

- How to implement continuous improvement activities in product development teams (in Lean/Agile teams and teams following a classical approach)
- How to measure improvements
- How to continuously visualize improvements for fast feedback.
